                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
          l number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Bediated by G proteins leading to stimulation of adenylate cyclase consultin-like peptide (INSL3) (By similarity)

C --- SUBCELLULAR LOCATION: Integral membrane protein.

C --- SUBCELLULAR LOCATION: Integral membrane protein.

C --- SUBCELLULAR LOCATION: Integral membrane protein.

C --- SUBCELLULAR DECEST IN LORB seems to be a cause of impaired testicular descent (known as cryptorchidism).

C --- SIMILARITY: CONTAINS 1 LEUL-RECEPTOR CLASS A DOWAIN.

C --- SIMILARITY: CONTAINS 1 LEUL-RECEPTOR CLASS A DOWAIN.

C --- SIMILARITY: CONTAINS 1 LEUCINE-RICH REPEATS (LRR).

C --- SIMILARITY: CONTAINS 1 LEUCINE-RICH REPEATS (LRR).

C --- SIMILARITY: CONTAINS 1 LEUCINE-RICH REPEATS (LRR).

                                                                                                                                                                                                                                                 testicular descent (known as cryptorchidism). It is one of the most frequent congenital abnormalities in humans, involving 2-5% of male births. Cryptorchidism is associated with increased risk of infertility and testicular cancer.

SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS. SIMILARITY: CONTAINS 1 LDL-RECEPTOR CLASS A DOMAIN.

SIMILARITY: CONTAINS 10 LEUCINE-RICH REPEATS (LAR).

CAUTION: It is uncertain whether Met-1 or Met-18 is the initiator.

FUNCTION: MIGHT DIRECTLY TRANSDUCE SIGNALS CARRIED BY LARGE
EXTRACELLULAR (LIPO) PROTEIN (COMPLEXE) S INTO NEURONAL EVENTS.
SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN A SMALL NUMBE
NEURONS MITHIN THE CENTRAL NERVOUS SYSTEM AND TO A LESSER EX
                                                                                                                                                                                                                                                                                                                                                                                   IN THE HEART.

SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED SIMILARITY: CONTAINS 12 LDL-RECEPTOR CLASS A DOMAINS. SIMILARITY: CONTAINS 7 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   : ||||:

(C elements of the ovine follicle stimulating hormone. The activate of isoform FSH-R1 is mediated by G proteins which activate of isoform FSH-R1 is mediated by G proteins which activate adamylate cyclase. Isoform FSH-R2 and FSH-R3 also bind FSH, but his does not result in activation of adenylate cyclase. Isoform FSH-R3 may be involved in calcium signaling.

(C FSH-R3 may be involved in calcium signaling.

(C ISOFORMS FSH-R1 and FSH-R2); Cell surface (1soform FSH-R3).

(I SOFORMS FSH-R1 and FSH-R2); Cell surface (1soform FSH-R3).

(I SOFORMS FSH-R3 and FSH-R4; are produced by alternative splicing.

(C elements of the produced by alternative splicing.

Biochem. Biophys. Res. Commun. 197:1062-1069(1993).

-I- FUNCTION: PROBABLE RECEPTOR FOR GENCOPROTEIN HORMONE.

-I- SUBCELLULAR LOCATION: Integral membrane protein.

-I- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED REFSH/LSH/TSH SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        PROSITE; PS00237; G_PROTEIN_RECEP_F1_1;

THE ACTIV OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVATE ADENYLATE CYCLASE.

SUBCELLULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: SERTOLI CELLS AND OVARIAN GRANULOSA CELLS.

SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS

T'Structure of the bovine follicle-stimulating hormone receptor complementary DNA and expression in bovine tissues.";

Mol. Reprod. Dev. 39:127-135(1994).

C-I-SUNCTION: RECEPTOR FOR FOLLICLE STRULATING HORMONE. THE ACTIV.

COPTIS RECEPTOR IS MEDIATED BY GROTEINS WHICH ACTIVATE ADENYLATE CYCLASE.

-I-SUNCLULAR LOCATION: Integral membrane protein.

C-I-SUNLLARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS

PSH/LSH/TSH SUBFAMILY.

-I-SUNLLARITY: CONTAINS 6 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PSHR BOVIN

"Cloning and functional expression of the luteinizing hormone
receptor complementary deoxyribonucleic acid from the marmoset monkey
testis: absence of sequences encoding exon 10 in other species.";

Endocrinology 138:2481-2490(1997).

-I- FUNCTION: RECEPTOR FOR LUTROPIN-CHORIOGONADOTROPIC HORMONE.
THE ACTIVATE OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH
ACTIVATE ADENYLATE CYCLASE.

-I- SUBCELLULAR LOCATION: Integral membrane protein.

-I- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
FSH/LSH/TSH SUBFAMILY.

-SIMILARITY: CONTAINS 5 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                REPEAT
